3	The lecturer was very patient with the questions and explained very well. The information on the webside that was provided will help a lot when reading into some topics afterwards.	
4	well organized and informative, and a lot of resources	
5	The lecturer was very nice, he answered all questions, the course is well structured and the explanation was clear and enabled me to understand complex subjects.	

	<p>All questions are addressed and if the teacher does not immediately give an answer, he provides us with the resources and tools that could help us.</p> <p>Excellent command of English language and perfect pace while he speaks.</p>	
6		
7	<p>Simplicity and to the point meanwhile sufficient to cover the maximum need</p>	
9	<p>Practical examples were explained, there was enough room for questions. It was possible to work in the lab in the morning and still attend the course.</p>	
10	<p>I liked the course in general, especially the newest functions of tidyverse the experimental design part, and Markdown.</p>	
12	<p>Paul Schmidt was very competent and the online skript was very well structured.</p>

3	<p>Some topics were repetition for me, but it is crucial to include it to fit everyone's interests and statistical background.</p>	
5	<p>Well stured course, and clear explanations</p>	
7	<p>Less time</p>	
10	<p>No thing.</p>	

	I think it would be better to have the german and the english course in two different weeks, because sometime he got confused what was already discussed or what was discussed in the other course.

	PDF output/LateX implementation, but this is probably hard because the setup is not so easy without administration privilege Good formating of output output is also important. For example all the ggplot2 functions. For me molecular work would be interesting - For Example Bioconductor packages to explore HTS data. But this may be a bit far from statistics.

10	I would like to have more information about models for count data in particular with the mixed model effect.	
12	More courses on different topics would be nice. Some might not need a whole week, but maybe just two or three days on more specific topics. E.g. generalised linear models, ggplot, maps
