

Evaluation of the workshop “Statistics with R - an Introduction”

Lecturer: Dr. Paul Schmidt

Attendance: 11(10 filled out the evaluation)

Date: July 9 and 10, 2025

The total may deviate from 100% due to rounding.

What did you especially like?

- There was a lot room for questions and Paul responded to everyone and was always very friendly and helpful. I felt that I was in good hands
- Lecturer was very organized and had great supporting materials. He explained everything in a clear way
- Hands on application of learned topics. Good exercises!
- It was well-structured and the hands-on experience helped with a deeper understanding of R and R-Studio.
- The materials were conveyed in a straightforward and understandable way
- The lecturer was very open and relaxed, so one wasn't afraid to ask questions
- The pace and the fact that the lecturer also helped everyone, who experienced problems.
- The well prepared lecturer.
- The instructor was very knowledgeable. One can easily see he has extensive experience applying R to statistic analyses. He could answer all the questions but also was not afraid of searching in case he was not 100% sure about a certain issue.

What do you think could be improved?

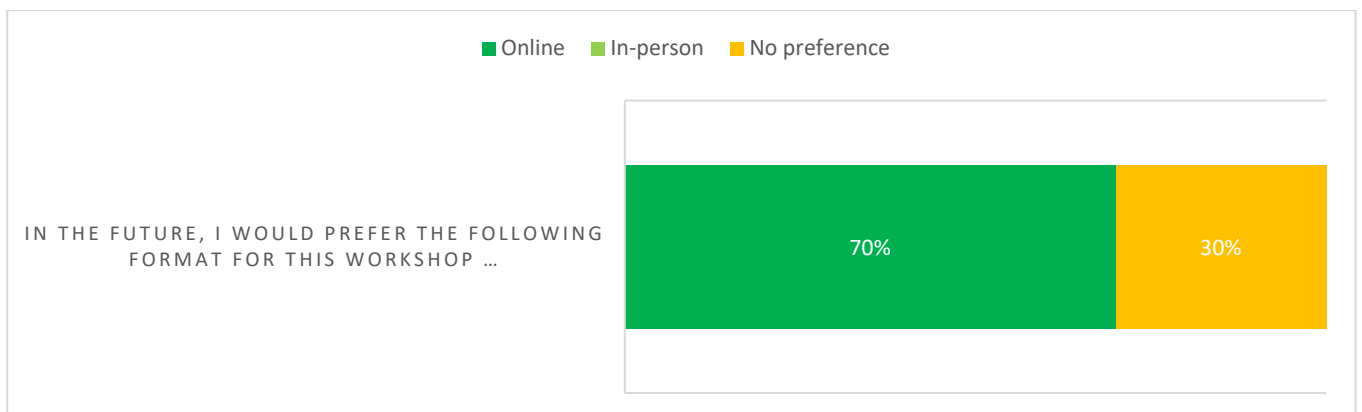

- I think the group was not all on the same level, maybe you could offer workshop for people who never used R before and which are already a little bit more familiar with tha, because sometimes I had the feeling can't ask even if Paul left enough space for that
- The course could be longer to cover more topics. Like a week or so. But the time during the course itself was utilized to maximum
- Some more insight into different statistical methods. Maybe some background knowledge to know which test to apply for what dataset.
- I really liked the exercises we did, so I would like to have more exercises to apply the knowledge I have learned (maybe one per topic)
- I understand this was an introductory course, with no prerequisites. However, I would like to have seen more Statistics during the workshop. I had the impression the focus was more on the programming language then on the statistical techniques. It was rather a "R for Statistics" workshop, and not "Statistics with R".

Comments on the extent of the workshop

- I think few more days with the workshop would be excellent. Two days are a short time for the whole usful things we could go through for our publications
- One or two more days would be very helpfull for such a complex topic.
- Would be nice to have a more broad, extended program to improve our skills on using this software.
