

Evaluation of the workshop “Statistics with R - an Introduction”

Lecturer: Dr. Paul Schmidt

Attendance: 13 (13 filled out the evaluation)

Date: July 6 and 7, 2026

The total may deviate from 100% due to rounding.

What did you especially like?

- the close-to-reality way of explaining. lots of examples, inside tips etc
- Small group, very interactive
- Very well explanations for all the levels
- I liked that the lecturer took time to solve all the errors participants encountered. Also the topics were explained in a good manner
- The lecturer was very calm and professional. His English was excellent (in contrast to other workshops I attended here). I also liked that I had the choice myself which parts I prefer to listen to only, or whether I want to go along with the demonstrated R applications.
- Showing many tools and letting participants decide which they like most and want to use in future
- The lecturer explained everything in detail, answered questions well. I also liked having lecture notes available all together.
- I like that we are given sufficient time to run the commands along with the instructor. Also the notes provided are clear and can be followed outside the class.
- Well-balanced work to break ratio as this kept the mind fresh throughout the day, and thorough explanation of all functions and how R as a language works

What do you think could be improved?

- the second day was a little harder to follow
- maybe some tasks / information beforehand so the beginning part can be shortened

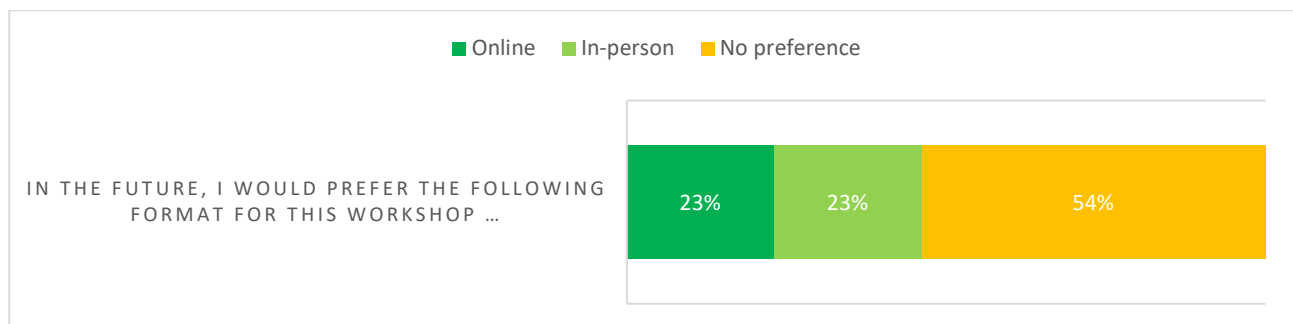

- 1. This course online is quite difficult in my opinion as it feels like many hours straight just listening. You can follow what the lecturer is doing, but if you stop for a moment - as I did as I had to leave for an urgent spontaneous meeting - you're out. I didn't follow anymore in the second day as I hadn't had the data loaded somehow. I think it would be nice to start the second day with a fresh up.
- 2. It would be nice to have some more interaction. Maybe just having more exercises and breakout room where people have to solve them would help already.
- I was hoping for faster paced course, but since it was introduction to the topic I would say approach of the lecturer was justified
- I was hoping to learn different statistical analysis methods, how to approach to data to decide which test works well, how to apply different methods. We spent way too long time for basic R and basic info like what is p value. Every PhD student should know what is p value already. I would expect the focus to be on statistics.
- I think in the future, we could have a session to run our own data so that some issues we face in the actual data analysis are addressed. Just as a plus
- Maybe also some tasks where we did not discuss all the functions already or have to find out a specific aspect of the function ourselves as coding always involves testing new function/aspects of functions

Comments on the extent of the workshop

- It is sufficient for an introduction to R

The exact wording (including abbreviations, punctuation, etc.) has been adopted.
